Course Summary

Course Description	<p>Language permeates every aspect of our life – cognitive, social, economic, and political. In this course, we will explore language as a fundamental aspect of human cognition. How does language affect thought processes? How does language relate to the mental capacities that people have? How do we process language? Are there areas of the brain specialized for language? How do we learn language as a child? Is this process different from learning language as an adult? What are the different accents in English? How is language used in everyday conversation?</p> <p>This course will introduce you to the complexity and creativity of the acquisition and use of language. Just like breathing, producing and understanding speech is a natural activity that we engage in daily, with little conscious awareness or effort. In this course, we will study the processes that underlie this ability. The more you understand about language, how it is learned, and how it is processed, the more you understand yourself</p>
